## Who Is Science?

Science is driven by people. It is a "shared human activity." Delve into the many facets of what it means to be human and to do science.

---

## Becoming Human

Discuss how humans survived evolution and all other hominid species, and explore the question of humanity's resilience and uniqueness.

---

## Humans and Race

Racism is still real, and the history of science is far from perfect. Here we explore how science contributed to racism historically and provide tools to understand modern implications.

---

## Science: The Wide Angle

Spark a discussion about forefront science topics: evolution, neuroscience, biology, physics, history, and philosophy of science.
